What's your Problem?

# What's your

# Change Your

**We encourage and support  
the creation of your future.**

# Problem?

to Big

If you have any concerns or questions but are not sure about what to do or who to consult, feel free to contact us. With the keyword “Change ? to !”, our professional staff can offer products and systems most appropriate for you from a broad perspective based on rich information, networks, and previous achievements in a wide range of fields and industries.

## **We are confident in our clean packaging environment for products**

In the field of electronics, the adoption of packaging methods appropriate for individual product characteristics, such as anti-static measures, dust resistance, and exclusion of moisture, is extremely important. Based on our extensive experience and achievements in the field, we offer packaging plans and environmental measures most appropriate for your products.

# **Electronics**

■ Vacuum forming and injection molding tray

In addition to selling molding trays, we design, build, and select materials for molds according to your

■ Clean protective film

The optimum film is selected for delicate items from a wide range of product lineups, including additive-free, static-proof, and clean products..

■ Desiccant/Aluminum bag/Moisture indicator

All issues are resolved that might arise during the storage and transport of products that are sensitive to moisture.

■ Functional film/Tape cutout

Such materials as films for liquid crystal display and optical films are processed with high precision in a clean workspace.

■ Anti-static products

For electronics products sensitive to dust and static electricity, we offer total production support up to packaging for transport and storage.

■ Clean booth

We can change your work environment, whether an entire factory or one working room, into a clean environment for critical operations. We also respond to requests for installing additional booths.

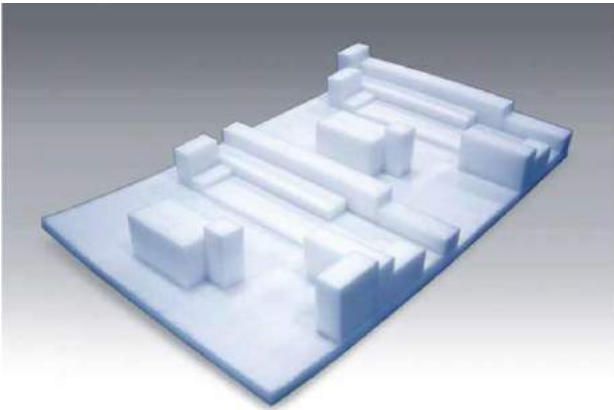

## **Keywords are wrap, transport, and protect**

In the fields of consumer electronics and automobiles, most components are large or have a complicated shape, which always raises transport issues. With reliable design capabilities, we offer ways to protect your products and improve transport efficiency at the same time.

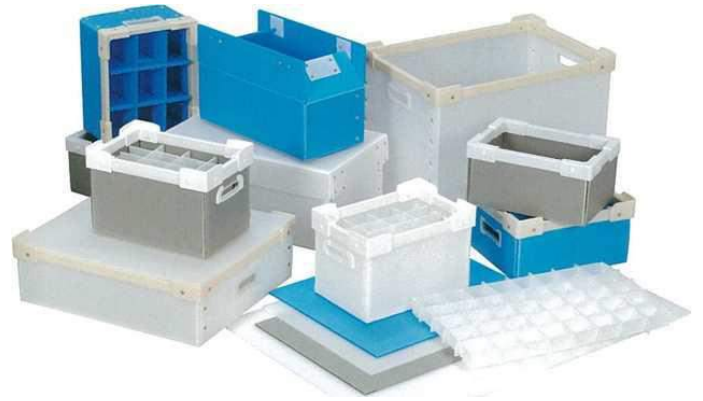

# **Consumer Electronics & Automobile**

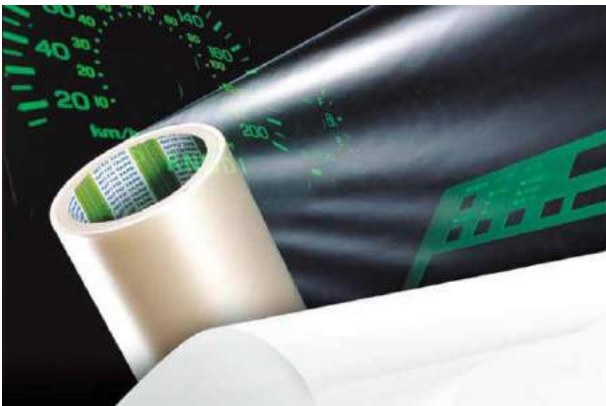

■ **Cushion materials**

For safe transport, packaging is designed to be the most appropriate using different foam cushion materials.

■ **Corrugated plastic materials**

Through improvements in transport efficiency, our corrugated plastic materials offer superior machinability and repeated use for total cost reductions.

■ **Protective film**

To protect valuable products from scratches and dirt, our films are most appropriate for individual applications.

■ **Antirust products**

The problems of rust are addressed through a variety of methods: films, trays, oils, and tablets

■ **Thick vacuum forming tray**

Transfer trays by vacuum forming are available at low initial cost for heavy items, which were conventionally produced by injection molding.

■ **Injection molded parts**

For plastic automobile components, machine components, and components of electrical appliances, we perform the whole process from design and die manufacturing to molding

## Safe, reliable products with attractive designs

In the food and medical industries, the quality control level is especially high. We provide customers with safe, reliable products by leveraging the Shingoshu group's capabilities, and we communicate the correct characteristics and quality of our products, as well as packages with attractive designs.

# Food & Medical Supplies

**■Clothing and Masks for clean environments**

Our products are intended for work in cleanrooms to meet customer requirements from the perspectives of cleanliness and cost.

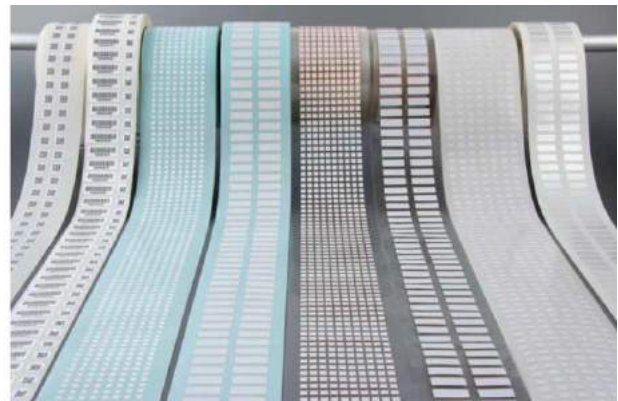

**■Gloves**

Our gloves meet customer needs, which vary for each industry, in order to ensure hygiene, remove static electricity, and prevent accidents or foreign matter contamination.

**■Bottle Containers**

We offer containers intended for R&D purposes and applications in various industries using high-functional resins and general-purpose resins.

**■Clean labels**

We minimized foreign matter, such as paper dust, on our labels.

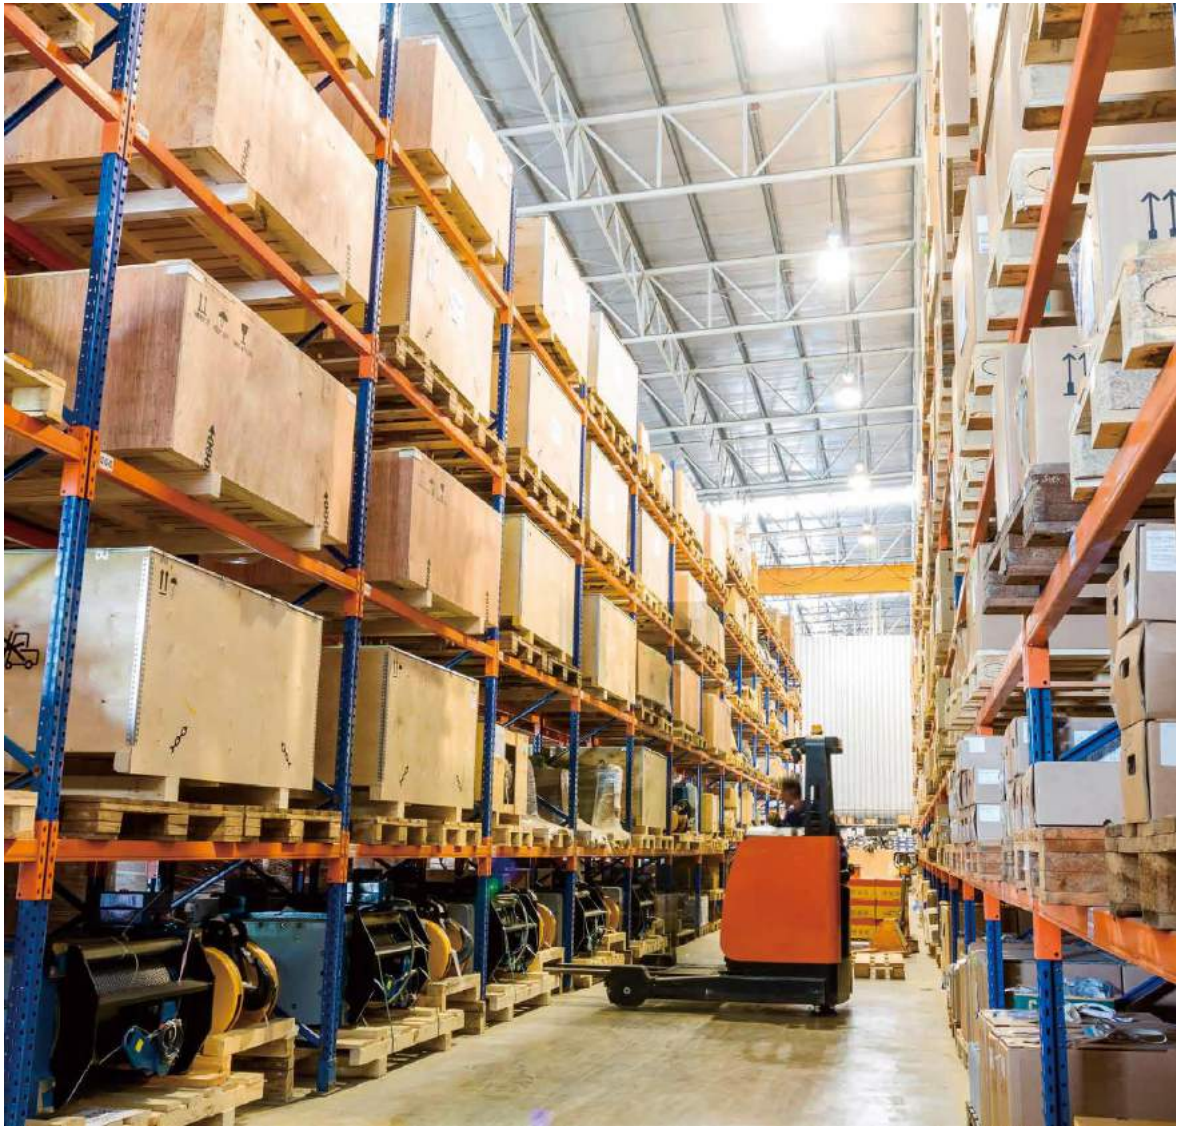

**■Laminate film**

Our multilayer films are suitable for food, as well as electronic components and industrial use.

**■Packaging box**

We can provide both graphic package design in the product development process and shapes offering high added-value.

## Realization of both storage and transportation efficiencies and safety

In recent years, requirements for logistics are becoming more diverse, and efficient transport and storage is becoming more important. Our diverse methods of improving warehouse space and the load efficiency of trucks and containers result in a total reduction in costs.

# Export & Logistics

■ **Plastic pallet/Container**

Our wide variety of plastic containers and pallets play major roles in logistics.

■ **Cage cart/Mesh pallet**

We accept inquiries for logistics materials intended for storage and transport inside the factory as well as for product shipments.

■ **Reinforced corrugated cardboard**

Our designs reduce transportation costs and improve workability for heavy objects that have conventionally been packed in wooden and other types of boxes.

■ **Cluster box**

This large returnable container reduces storage and transportation costs by significantly improving load efficiency..

■ **Fiber drum**

With broad applications in powders, liquids, solid matter, films, and steels, custom-made products are available to suit the intended application.

■ **Flexible container**

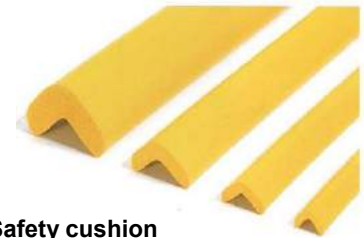

In addition to a complete line of existing products intended for transporting a large amount of particulates, we accept orders for customized and original fabrics or shapes.

## New proposal that leads to the future Earth

As part of our efforts to achieve a sustainable recycling-oriented society for the future, we consistently focus on the 3Rs.

# Safety & the Environment

### ■ Safety cushion

We ensure safety in our customer's factories and during transport by offering products with L, flat, round, and other shapes.

■ Protective suits

By adopting materials and shapes suited for the intended application, protective suits protect customers from the contaminants of oil, dirt, and hazardous substances.

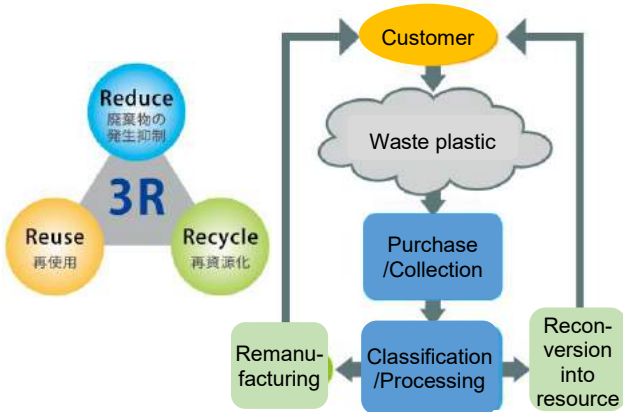

■ Heat insulation film

A transparent film blocks UV rays and improves air conditioning while retaining the original level of brightness. The film also prevents broken glass pieces from scattering all over the place.

■ Cleaning

Our cleaning systems serve as a countermeasure against in-factory contamination from dirty pallets and containers..

■ Recycling system

The recycling system converts waste plastic materials, which were conventionally expensive to dispose of, into useful resources.

■ Seismic-resistant products

Nets, belts, and vinyl partitions and other methods protect the products stacked on shelves as countermeasures against earthquakes.

## Global network centered in East Asia

In recent years, cost reduction by means of overseas material procurement has become an important option. Our global network in East Asia offers quality products manufactured overseas.

# Importation

**■Resin**

We ensure safety and reliability of reasonable general-use resin products manufactured overseas through internal study and analysis.

**■Films**

A variety of films of stable quality intended for both packaging and industrial use are available..

**■ Corrugated plastic sheet PLADAN**

Low-price foreign-made sheets are procured for use in the manufacture of corrugated plastic materials at domestic sites under our quality control system.

**■Container**

Foreign-made containers are intended for paints, pastes, and powders. Please consult us for products intended for other purposes.

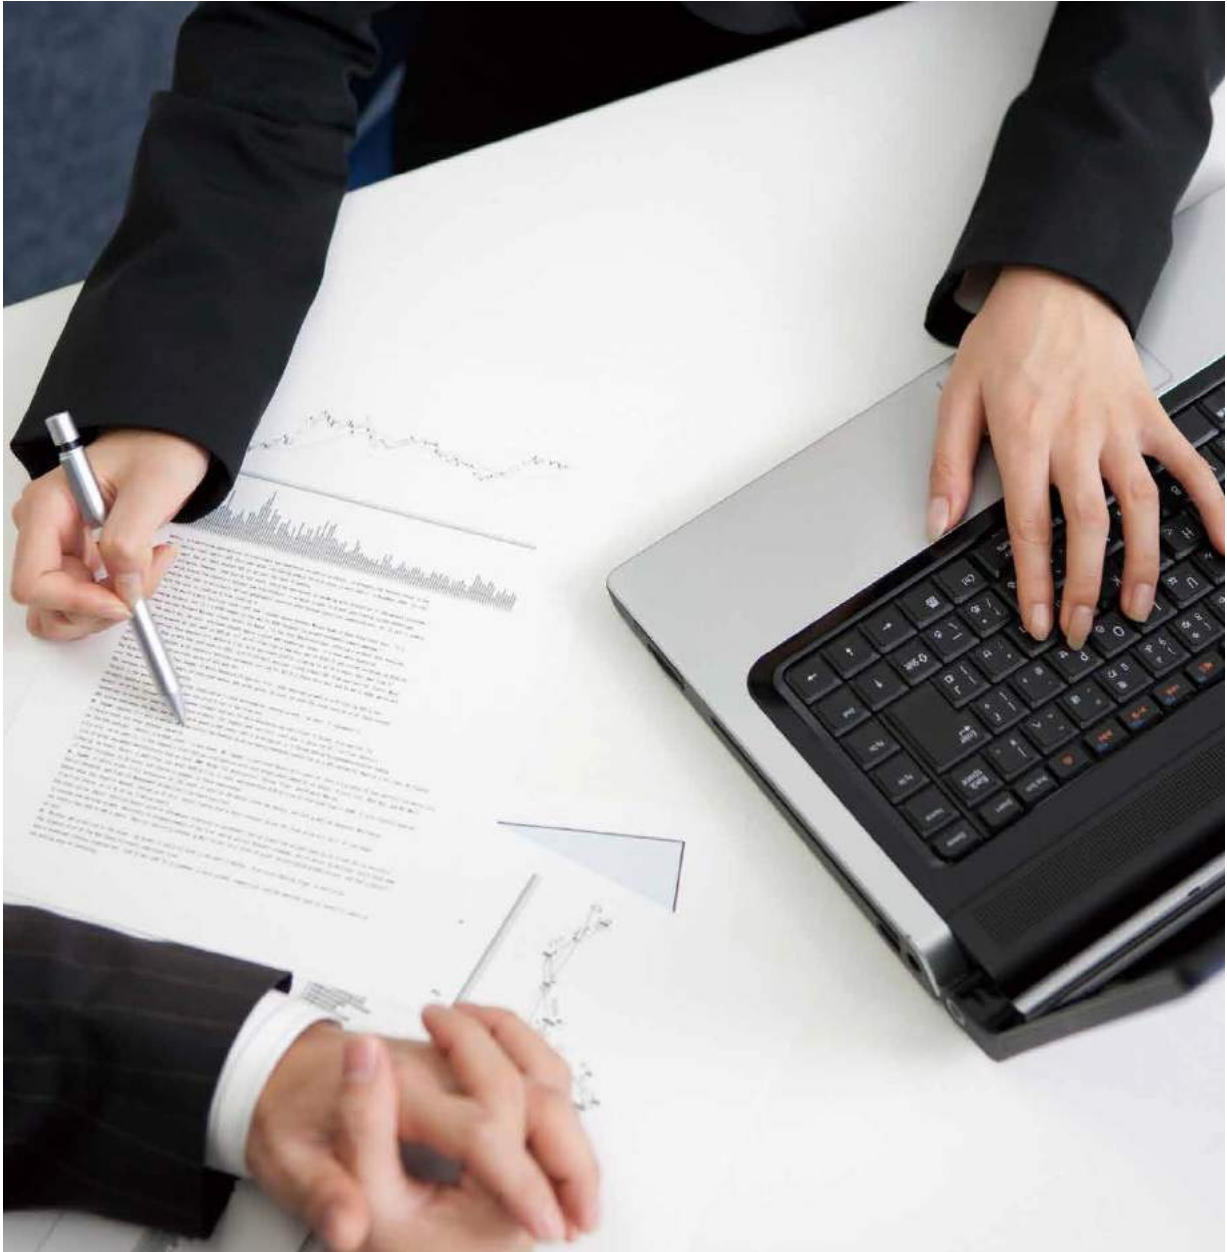

**■Hot-melt adhesive**

Hot-melt adhesives are suited for adhesion between paper and paper, paper and a film, and other applications.

**■Injection molds**

Major foreign manufacturers have adopted our molds, which offer superior cost performance.

## Find your best item from our abundant lineup

If you are not sure about where you should purchase or who to consult, please contact us first. We offer products most appropriate for your purpose from more than 1000 partner companies.

## Basic Items

■Packaging paper

■Paper core/Plastic core

■Cushion materials

■Packaging tape/PP band

■Stretch film

■Films

■Packaging machine

■Packaging machine for stretch

■Flanges

■Box making machine

■Labeler

■Carrier

■Sealer

■Printer

■ Air cushioning material maker

# Our professionals are on hand to help you with enthusiasm and speed

## Investigation/Proposal

Based on the latest information and extensive experience, we offer plans and systems most appropriate for you. In response to diverse needs, we suggest materials, processing, and systems from different viewpoints by leveraging our wide network and unique technologies.

## Design

Our quality, functionality, and safety will meet your requirements by making the best use of technologies and ideas. By considering every aspect of the materials, functions, shapes, and recycling, we offer design and manufacturing that is friendly to humans, objects, and the environment.

## Manufacturing

As a professional manufacturer, we strive for better quality, earlier delivery, and lower costs! By combining the right equipment with the latest technologies, we provide attractive products as the fruits of our ingenuity.

## Sales/After-sales service

Our highly skilled sales personnel will come to you. Looking to the future, we encourage the creation of products by the next generation. We accept the challenge of creating new value as the best supplier for our customers and thereby contribute to a prosperous future society.
